North Hopkins ISD

New Promethean boards from CPI empower hands-on teaching and a continued tradition of excellence.

# A Tradition of Excellence

North Hopkins ISD has a tradition of excellence and high expectations for learning, with contemporary technology tools for their classrooms.

They have strategically focused on on providing innovative tools and interactive applications to engage students at any level or learning style. The school district was one of the first in Texas to provide individual Apple devices for their students. ISD Superintendent Dr. Darin Jolly and his team are always seeking strategies to improve their school and personalize each student's learning experience.

Collaboration Catalyst

It seems as if the whole school agrees that new Promethean boards, provided by CPI, have shifted the way the children are learning and retaining lesson material.

Actively involving students in the learning process is easy because of the Promethean boards' touch screen capabilities. The software allows students to get hands-on experience in classroom material, and learning is no longer a spectator event.
> " Now we are able to take a field trip every class period to places all across the globe! My students love to see and experience the places we are learning about."
>
> **Mrs. Angela Sancho**

> "I use the Promethean board every single day; it's the only thing I use to teach. Everything in my classroom and in my lesson plans are tied to the Promethean Board. I've used other models, and nothing compares."
>
> **Mrs. Tasha Corley**

In an interview with CPI, Dr. Jolly spoke highly of the transformation that their school has experienced since implementing over 30 Promethean boards into their secondary school. He explained that student engagement has "quickly escalated since [the] recent installation and implementation of [the] 75-inch Promethean boards in all secondary classrooms in December of 2018 … Peer-to-peer collaboration has advanced cooperative learning strategies, with Promethean split-screen options and scientific apps for dissection."

> "Peer to peer collaboration has advanced cooperative learning strategies, with Promethean split-screen options and scientific apps for dissection."

I'm thankful for the great relationship that North Hopkins ISD shares with CPI of Sulphur Springs, Texas. From the onset, CPI came to our district with extreme measures of customer service, asking 'How can we help you?' [with] technology advancement, copy/print operations, document storage, and even safety considerations with security cameras on campuses and buses. As an alumnus of North Hopkins High School, [CPI Director of Solutions] Heather Brown has firsthand experience and perspective for excellence in our school, heightened now as a parent of three students in our school district. Her personalized perspective for excellence in our school has streamlined our educational advancements with CPI, as a result of her authentic care for the best of our students in our culture and our high expectations for learning."
